

APPLICATION : Escalators
LOCATION : France
DIFFICULTY : Maintenance
CHAIN TYPE : Transmission chain

SUCCESS STORY

On an escalator operating outdoors 7 days a week, the steps were polluted at each lubrication of the handrails driving chains located inside this escalator. Consequently, the customer had to clean the steps after each lubrication process.

He therefore needed chains which meet their driving function but with **minimum maintenance**.

We have proposed a **Delta® Verte®** transmission chain which doesn't need any lubrication thanks to its composite bushes, and which is fitted with Delta® anti-wear pins and with an anticorrosion coating, in order to operate outside.

The results exceeded the customer's expectations: not only the technical intervention stops and the steps cleaning have been avoided, but also The Delta® Verte® chain lasted twice as long as the previous standard chain !

GLOBAL SAVINGS OF MAINTENANCE &
CHAIN PURCHASE OVER SEVERAL YEARS

NO STOPS OR CLOSURE
OF THE ESCALATOR

WORKING DAYS SAVED
FOR THE CUSTOMER'S TEAM

SAFETY OF THE INSTALLATION
NO POLLUTION OR
RISK OF FIRE

CHAIN SERVICE LIFE

x2

compared to the previous chain
