

APPLICATION: Food industry
LOCATION: UK
DIFFICULTY: Elongation
CHAIN TYPE: Adapted Chain

CASE HISTORY

The customer is a leader in the food industry. They have been using Stainless Steel products on their food-packaging line for years. However the machine is subject to several wash downs which has some mild detergents and is subject to 1080 starts and stops per hour, both of which are quite challenging for chains.

The competitor's chains were lasting only several months before they stretch so much that it caused them to need to be changed. We therefore proposed the use of our Delta® Titanium 2 chain complete with triplex pins.

As the chain operates on a plastic wear strip and the sprockets were not in stainless steel, the chain worked very well: it was corrosion and stretch resistant. It lasted over three times the life of the competitor's stainless steel option!
