

**APPLICATION:** Tiles Factory  
**LOCATION:** UK  
**DIFFICULTY:** Matched lengths  
**CHAIN TYPE:** Adapted Chain

# CASE HISTORY

Our customer, one of the leaders in the tile industry, used a standard adapted 20B1 chain with K1 attachments on their elevators. The tiles are sent onto the elevator at such a high speed that the accuracy of the installation is critical; and the presence of dirt and dust can lead to faster wear of chains.

As four chains work in parallel, when one gets worn more quickly it regularly needed to be adjusted and to do so production had to be stopped so they could change the chain. We therefore proposed a set of four matched DELTA® chain, with the tightest tolerance possible.

The Delta® treatment prevented the chains from wear as no other treatment did. As the chains were in a matched set of four, they run perfectly together and the customer have had no issues with the chains wearing prematurely. These chains lasted over twice the life of the previous chains! That's why our chains are installed on all the customer's machines.

**LIFE TIME**  
**X2**  
compared to the previous chains
